Removing moisture and odours

A carbon based desiccant that outperforms silica gel. Removes moisture and smells easily, especially where it's really needed!

**INVENTION NUMBER:** 2016_060

---

**The Technology**

A superior moisture management material that is carbon based and outperforms silica gel.

The material applied to a polymer film or textile has the potential to enhance current moisture management materials in footwear and apparel.

**Key Benefits**

- Environmentally friendly carbon based material
- Double adsorption capacity compared to silica gel
- Low temperature rapid regeneration
- Low energy costs for regeneration - compared to silica gel
• Stable over many adsorption/desorption cycles

Applications

• Footwear
• Apparel
• Packaging
• Electronics

Researcher Details

Rakesh Joshi, PhD, Lecturer
Veena Sahajwalla, PhD, Scientia Professor
Director, SMaRT@UNSW
Sustainable Materials Research & Technology

Scientific Specifications

Proof of principle demonstrated through laboratory experiments.

Opportunity

UNSW is seeking a partner to license this technology or to work with the researchers to further develop this technology.
